PROFESSIONAL SUMMARY

Computer Science student at the University of Oklahoma (3.5 GPA) seeking a software engineering internship. Built and deployed a full-stack Flask web app with user accounts and a PostgreSQL database; developed a C++ game; and presented a Java benchmarking study to faculty and industry judges. Experience coaching a team of 10+ associates and analyzing performance metrics.

EDUCATION

University of Oklahoma — Bachelor of Science in Computer Science Norman, OK

GPA: 3.5 | President's Honor Roll (Spring 2026) | Expected May 2028

Relevant Coursework: Data Structures, Discrete Structures, Programming Structures and Abstractions

Deer Creek High School — High School Diploma

Edmond, OK

Valedictorian, Oklahoma Academic Scholar | May 2024

EXPERIENCE

Customer Service Specialist

July 2024 – Present

Dick's Sporting Goods

- Coach and train 10+ associates one-on-one on customer-facing processes, including protection plan and credit application processes.
- Track and analyze monthly store performance metrics against other stores in the district, preparing reports to identify gaps and measure progress.
- Ranked first among peers as Metric Leader (July 2026) across protection plan sales, credit card applications, and account registration rate.
- Leading a semester-long leadership project (Fall 2026) coaching the team to raise NSPP sell rate, credit card applications, and the store's ScoreCard account rate toward an 80% target, reporting progress in monthly metrics reports.

PROJECTS

Workout Tracker (Web) | Python, Flask, PostgreSQL, SQLAlchemy, Chart.js

Live demo: [Workout Tracker](#) | GitHub: github.com/landonalexander16/workout-tracker-web

- Built and deployed a multi-user Flask web app (Render, Neon PostgreSQL) for logging workouts, with per-exercise max-lift stats and progress charts.
- Designed a four-table relational schema (users, workouts, exercises, sets) in SQLAlchemy with foreign keys, cascade deletes, and a unique user-and-date constraint.
- Implemented registration and login with Flask-Login and hashed passwords; enforced per-user data isolation by verifying ownership on every edit and delete route.
- Added server-side validation, edit and delete with automatic cleanup of empty records, and hardened sessions with secure, SameSite cookies and environment-based secrets.

Iteration vs. Recursion Performance Benchmarking — Research Project

OU Gallogly College of Engineering

Faculty Advisor: Dr. Sanjana Mudduluru | Team of 4

- Designed and executed a cross-platform benchmarking study in Java comparing iterative and recursive implementations of Binary Search, Factorial, Fast Exponentiation, and Fibonacci algorithms across Windows, macOS, and Linux.
- Identified and documented a key performance distinction between source-file and pre-compiled execution modes, strengthening the study's methodology and conclusions.
- Presented findings as a research poster to faculty and industry judges.

Snake Game — C++, SDL2

GitHub: github.com/landonalexander16/snake-game

- Developed a 2D Snake game in C++ with SDL2, using a deque for the snake body and grid-based movement timed independently of frame rate.
- Implemented food spawning, growth, and wall and self-collision checks that validate each move before updating game state.

SKILLS

Programming: Java, Python, C++, HTML/CSS

Web & Data: Flask, SQLAlchemy, Flask-Login, Jinja2, Chart.js, PostgreSQL, SQLite

Tools: Git/GitHub, VS Code, Eclipse, JUnit, SDL2, Microsoft Office

Professional: Troubleshooting, user training, technical documentation, team leadership
